* consists of 21 contigs. The true order of the pieces r is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the flitshed sequence as soon as it is available and the accession number will be preserved.

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 7 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 56 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          sequencing reads that have not been assembled into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             will be sequenced to completion. In the event that
the record is updated, the accession number will

The method of the invention is useful for identifying substances which can be used to treat P2X7-associated discretes (specially inflammantion and immune diseases). The method can be used to method can also be used in developing new drugs that target particular allelses. The polymorphisms identified by the method of the invention can be used as genetic markers in linkage studies. The present DNA sequence represents the coding region of the human P2X7 gene.

The present sequence is the coding sequence for human purinergic receptor P2X_7/P2Z. This sequence can be used to treat disorders of the nervous system, particularly diseases with a component of chronic inflammation, such as Alzheimer's diseases involving acute or chronic inflammation such as rheumatoid arthritis, amyloidosis, bacterial, viral and other microbial infections, disorders of the haematopoietic system and immune response such as autoimmune disorders, allergies and lymphoproliferative disorders, diseases involving apoptotic cell death, such as cardiac and cerebral isohaemia and microbial infections, particularly tuberculosis. The human P2X_7 gene has been localised to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

It was isolated from a human adult secreted protein (see AAM$8390). It was isolated from a human adult careful control in the clone is deposited in composite clone secreted proteins. The clone is deposited in composite clone is close and casigned to isolate CO390_1 DNA from the composite clone. Novel cDNA clones of acceptance may contain an Alu repetitive element. Novel cDNA clones (see AAV$9916-32) coding for human secreted proteins (see AAW$8580-90) are claimed. These can be used for recombinant production of the secreted proteins for analysis, characterisation, diagnostic or therapeutic use. They can also be used as tissue or mol. Wt. markers, for chromosome identification, to identify genetic disorders, to isolate new related DNA, as sources of primers for PCR, to generate may have many biological activities, es; cytokine, immunomodulator, harmonical activity, elementary and this activity activity harmonical activity activity and think activity and the manostatic or chemotactic or chemotactic or chemotactic activity, activit harmonical activity activit harmonical activity activity activit harmonical activity activity activity activity and the acceptance of activity activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
